- Improved management of report content and distribution to more people at a much lower cost per head
- More timely and relevant report information—can be delivered to a variety of devices eg. SMS to mobile phone
- Better quality and timeliness of report information, improving service levels
- Controlled empowerment of users—reducing the burden on IT resource
- Monitoring the use of information to maximise its

WHY INFOFLOW REPORT MANAGER FOR SAP PRODUCTISED SERVICE?

Infoflow Report Manager for SAP Productised Service provides simple and cost effective access to SAP reports. It delivers centrally managed enterprise wide scheduling and distribution with intelligent content management that provides users across the enterprise with a unified view of SAP Reports containing information that is relevant to them and roles they perform. Reports are delivered at an agreed time on an agreed frequency without end user action.

The packaged service will significantly improve the use and availability of the many reports that are currently available from within SAP that until now may have been inaccessible to the wider enterprise thus extending the reach, value and influence of SAP to more people.

Infoflow Report Manager for SAP can be configured to enable external users such as Customers and Suppliers to access their own information such as invoices, statements, order acknowledgements, purchase orders etc.

Infoflow Report Manager for SAP archives reports to enable users to access and print previous versions. It also offers a comprehensive audit trail for monitoring the usage of reports across the enterprise.
